**DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE**

The Floyd Georg Farm is located on the W side of Accident-Bitteringer Road, across the road from the entrance to G-III-B-105, about 2 miles S of Accident. The farm consists of two houses, a log springhouse and several modern farm buildings.

The main house is a two-story, gable-roofed ell plan dwelling with a three-bay, center-door facade. The facade points E and its first floor is covered with an enclosed, shed-roofed sunporch. The ground falls from E to W, creating a full basement on the W (rear) elevation. The ell is filled with a shed-roofed addition.

The house rests on a low cut stone foundation and its plank-construction walls are covered with asbestos shingles. On the N gable end is painted B (built) 1892, and on the S gable end is painted S (shingles) 1940). The windows are two over two sash, some with plain board surrounds and some without surrounds.

The roof is covered with slate shingles and has two interior brick stove chimneys. One chimney is just N of center on the main block and one is placed on the S side of the rear elevation. The facade porch has been enclosed with modern windows. And is roofed with tar paper. The house has a center staircase plan.

The second house on the property is positioned NE of the main house and is a two story, gable-roofed dwelling with a three-bay, center-door facade which points S. The first floor of the facade and the W elevation are covered with a hipped-roof porch.

The house rests on a coursed stone foundation and is covered with blue asphalt siding. The windows are one over one sash with plain board surrounds. The roof is covered with asphalt shingles and has exposed rafter ends. The house has one central brick stove chimney. The porch is covered with asphalt shingles and the roof is supported with chamfered posts. The interior arrangement is unknown.

W of the main house is a two-story, gable-roofed log springhouse, built of logs on a dry stone foundation. The logs are V-notched and on the N elevation the three bottom logs are notched into the stone foundation. The logs are chinked with boards and daubed with mud mixed with straw. The gables are covered with weatherboarding and the roof is covered with corrugated metal. The spring entrance is on the S elevation and the entrance to the upper level is on the E elevation. The springhouse has one interior stair on the S elevation. The wooden floors are held together with cut nails (see example). The springhouse is used for storage.

W of the house, up a steep slope, are a modern barn and silos and several modern farm buildings.

## STATEMENT OF SIGNIFICANCE

This site is part of a small community of log structures that includes G-III-B-105, 106, 107 and 112. The log springhouse may have been built in the mid-nineteenth century when these other log structures are supposed to have been built. The site may have been established by the Georg family, who settled G-III-B-105 and gave their name to George Hill to the SW of this site.

The main house is an example of a common western Maryland type. Houses of this general configuration, a rectangular main block and rear kitchen wing, were constructed in Garrett County from the late nineteenth through the early twentieth centuries.
